INVENTORY POLICY & WAREHOUSE CONTROL

1. OBJECTIVE & SCOPE

This policy outlines the governance of raw fibers, greige fabric, chemical inks, and finished fabric rolls across all Gokul Texprints storage facilities to optimize cash flow and eliminate production delays.

2. STOCK CATEGORIZATION & CODE ASSIGNMENT

All inventory must be tracked within the central ERP using the following system:

* RM-FIB: Raw Natural Fibers (Cotton, Viscose, Silk, Wool)
* RM-INK: Chemical Dyes, Fixatives, and Digital Inks
* SM-GRG: Unfinished Woven Greige Fabric (categorized by Thread Count/Width)
* FG-FAB: Finished Printed/Dyed Fabric Rolls
* FG-APP: Finished Apparel (Sarees, Kurtis, Dress Materials)

3. STOCK BUFFER & REORDER POINTS (ROP)

To maintain constant uptime for immediate print orders, the warehouse must uphold:

* Greige Base Buffer: A minimum safety stock of 50,000 meters of standard 60x60 Cotton and Premium Viscose Georgette.
* Ink Inventory: Minimum 15-day operational buffer of CMYK and specialized spot-color textile inks.
* Reorder Calculation: ROP = (Average Daily Consumption × Lead Time in Days) + Safety Stock.

4. BATCH LOGGING & SHADE LOT CONTROL

* Every printing batch must receive a unique Lot ID containing the Date, Machine Number, and Color Formula Code.
* Fabric rolls from different shade lots must never be mixed within a single wholesale bundle delivery to ensure exact color uniformity across garments.

5. LIFE-CYCLE STORAGE & LIQUIDATION

* Climate Control: Luxury bases such as Velvet and Silk must be stored in specialized low-moisture, elevated zones to prevent fabric rot, dampness, and color bleeding.
* Dead Stock Policy: Any fabric roll or finished ensemble remaining unsold in the warehouse for more than 180 days is flagged as "Slow Moving" and routed to the Sales Department for promotional wholesale liquidation or clearance discounting.
